

Thursday 30th Oct @ 06:00 UTC, MRO-PRO will have a major update to version 10.0.0

Version **10.0.0** is a major refinement of MRO-PRO adding new the first elements of our new Base Maintenance features and also patching bugs in version 9.10.

Release Overview – update highlights:

APP:

- Enhanced Tool search (tool # and description) in tool book out popup
- New Certification Tab validation ensuring capability is valid at the point of release

WEB-Application:

- New Base Customer type added to Commercial, mirroring Workshop Customers.
- Stage Library for Base Maintenance introduced (equivalent to Workshop Task Library).
- Updates made across Parts, Services, Equipment, Tooling, and Removed Parts to support Base Maintenance workflows
- Ability to activate/deactivate Bases including minor UI improvements to the Bases page
- Project Parts – ability to copy an action to all project parts
- Procurement Usage page performance and loading improvements
- Compliance pop-up added to the landing page giving detailed User compliance information.
- Base Maintenance Planning module released in beta for client testing

Critical Setup Items – *failure to setup these items will cause issue with the new features*

ALL:

- Nil

Please update the above as soon as 10.0.0 is released to ensure compatibility with the new features.

New Feature Overview

Base Maintenance Feature Overview

The first major components of the new **Base Maintenance module** are now being released — marking a significant milestone in the evolution of MRO-PRO.

This initial phase introduces the **AI-led Base Maintenance Planning functionality** within the web application, delivering a level of automation and workflow intelligence not previously available in the industry.

This new planning module intelligently handles task structuring, sequencing, resource requirements, parts and tooling relationships, and overall planning preparation — all designed to dramatically enhance accuracy and reduce the manual effort traditionally required for Base Maintenance planning.

The functionality is being released in **beta**, ahead of controlled client testing, to ensure we can refine and expand the workflow collaboratively with early adopters.

This feature is the **primary driver for the major version increase from v9.x to v10.0.0**, representing a significant architectural and functional step forward.

Beyond this module, the remainder of the release consists mainly of incremental enhancements and stability improvements — but the introduction of the Base Maintenance Planning engine lays the foundation for the full Base Maintenance suite coming in future releases.

Compliance Pop-up (Landing Page)

The landing page now shows a detailed pop-up summarising the User's compliance status across:

- Training
- Competency
- Authorisation
- Recency

This matches the structure of the Compliance > Users page.

Bases Active/Inactive

Administrators can now activate or deactivate Bases. Minor interface improvements have also been made to the Bases page.

Project Parts – Copy Action

Project Parts now support copying an action across all related project parts, improving efficiency and reducing manual entry duplication.

APP detailed overview

Function	Type	Detail
Workshop	Enhancement	Certification tab now restricts certification if the capability has expired, or been made inactive
Tooling	Enhancement	Enhanced Tool search (tool # and description) in tool book out popup

WEB-APP detailed overview

Function	Type	Detail
All Core Modules	Enhancement	Landing page updated with detailed User compliance pop-up.
Planning	New	Base / AI-led Base Maintenance planning module released in beta_.
Planning	Enhancements	Workshop / Added ability to copy action across all project parts
Commercial	New	Base / Customer – Base Maintenance Customer setup & control
Procurement	Bug	Parts / Usage – performance enhancements reducing page load time
Admin	Enhancement	Ability to activate/deactivate bases with UI improvements
