

Wednesday 15th July @ 06:00 UTC MRO-PRO will have a minor update to version 10.3.0.

Within Version 10.3.0, we have introduced a broad set of enhancements across the Web Application and APP, including performance improvements, updated filtering behavior, new compliance and reporting features, and several customer-requested workflow improvements. This release also includes targeted updates to Stores, Procurement, Workshop, Base Maintenance, SMS, Planning, Admin and Line Maintenance areas to improve day-to-day usability, visibility and control.

Release Overview - update highlights:

Release Overview - General / Performance

- Filtering architecture has been updated across all areas to improve page loading speed and responsiveness.
- Pagination and page routing have been updated to enforce loading between page changes and table clicks.
- LM Events loading has been optimised to improve performance within Planning / Line.
- Line Maintenance PDF formatting has been improved.

Release Overview - APP

- Stores Location Report now supports bulk QR label printing for all labels in a location.
- QR label formatting has been improved to prevent text wrapping from pushing QR codes onto another page.
- Workshop and Base Maintenance save prompts have been refined so users are not prompted to save when no changes have been made.
- Certification Readiness in Workshop and Base Maintenance is now clickable, directing users to the relevant page.
- Warning and caution messages in Workshop Orders now display for longer, making them easier to read.
- Read & Sign attachment windows have been increased in height and now support scrolling for multiple documents.
- Line and Workshop Orders now include quick start / stop job clocking options from the burger menu.

Release Overview - Web Application

- Vehicle management has been enhanced with file uploads, ownership, status options and configurable expiry items.
- Approved Suppliers can now have multiple configurable expiry dates, supporting additional compliance tracking items.
- Primary Parts now supports custom Part Tags for improved filtering and classification.
- Procurement Requests now include an AOG flag.
- Workshop Order listings now include additional icons and filtering for AOG and Core Exchange items.
- Base Maintenance CRS QR verification has been added to support external validation of CRS authenticity.
- Scheduled Reports can now be configured to email automatically on a daily, weekly or monthly basis.
- SMS findings, character counts and report export file names have been updated.
- Project Parts capacity has been increased to support up to 300 unique items.

CRITICAL STEP ITEMS – *failure to setup these items will cause issue with the new features*

- Nil

Please update the above as soon as 10.2.0 is released to ensure compatibility with the new features.

NEW FEATURE OVERVIEW

Scheduled Reports

Reports can now be scheduled to automatically email on a daily, weekly or monthly basis. This provides a more consistent and controlled method of distributing key operational and compliance reports without requiring users to run and send them manually.

Performance, Filtering and Page Loading

The filtering structure has been updated across the system using a caching-optimised approach to improve page loading speed. Pagination has also been improved so that table clicks enforce loading between page changes, reducing the risk of users moving faster than the page data has refreshed.

Vehicle Management Enhancements

Vehicle management has been enhanced to include file uploads, ownership details, status options and configurable expiry-date items. This provides a more complete vehicle record and supports better control of vehicle-related compliance activity.

Approved Supplier Expiry Dates

The Approved Suppliers List now supports multiple configurable expiry dates. This allows organisation's to track additional supplier-related compliance items such as KYC forms, certification expiries or other required documents directly against the supplier record.

Primary Parts - Part Tags

Primary Parts has been enhanced with Part Tags, allowing custom tagging and filtering of part numbers. This gives users a more flexible way to categorise, search and manage parts across Stores and Procurement workflows.

Base Maintenance CRS QR Verification

Base Maintenance now includes CRS QR code verification. When a CRS QR code is scanned, the user is taken to a dedicated verification page that confirms the authenticity and integrity of the CRS record.

Read & Sign and Training Email Notifications

Email notifications within MRO-PRO have been enhanced so that users can be notified when Read & Sign items or training items are assigned to them. Notifications are also available when these items become overdue, improving visibility and follow-up across compliance-related actions.

Project Parts Capacity Increase

Project Parts has been updated from a maximum 25-item cap to allow up to 300 unique items. This supports up to 300 individual non-serialised part numbers per order, or a total quantity of 300 serialised items.

APP detailed overview

Function	Type	Detail
Stores	Enhancement	- Location Report now supports bulk printing of all QR labels in a location. - QR label formatting improved to prevent text wrapping and page overflow.
Read & Sign	Enhancement	Attachment window height increased and scrolling enabled so multiple documents can be viewed more easily.
Workshop Orders	Enhancement	- AOG orders are prioritised to display above non-AOG orders. - Caution and red error messages now display for longer so they can be read more easily.
Workshop / Base	Enhancement	- Save prompt refined so users are not prompted to save where no changes have been made. - Certification Readiness is now clickable and directs users to the applicable page, such as Parts & Tools.
Line / Workshop	Enhancement	Additional burger menu options added to quickly start and/or stop job clockings on the order.

WEB-APP detailed overview

Function	Type	Detail
